Step 2: Save and Deploy Model

```python
import numpy as np
from flask import Flask, request, render_template
import pickle

app = Flask(__name__)
model = pickle.load(open('model.pkl','rb'))
@app.route('/')
def home():
    return render_template('ex.html')

@app.route('/predict',methods=['POST'])
def predict():
    int_features=[int(x) for x in request.form.values()]
    final_features=[np.array(int_features)]
    prediction=model.predict(final_features)
    output=round(prediction[0],2)
    return render_template('ex.html', prediction_text ='Price should be roughly ${}'.format(output))

if __name__ == "__main__":
    app.run(debug=True)
```

```python
import numpy as np
import pandas as pd
import pickle

toyota = pd.read_csv('toyota.csv')
x = toyota.iloc[:, 1:3]

y = toyota.iloc[:, 3]

from sklearn.linear_model import LinearRegression
regressor = LinearRegression()
regressor.fit(x,y)

#pickle.dump(regressor, open('model.pkl','wb'))
#model = pickle.load(open('model.pkl','rb'))
```
